

MOST IMPORTANT INFORMATION ABOUT KORLYM

Korlym can cause serious side effects, including:

- **Loss of a pregnancy.** Women who can become pregnant must:
 - have a negative pregnancy test before starting **Korlym** or before restarting **Korlym** if you stop taking it for more than 14 days
 - use a non-hormonal form of birth control while taking **Korlym** and for one month after stopping **Korlym**. Talk to your doctor about how to prevent pregnancy. Tell your doctor right away if you think you may be pregnant.

ABOUT KORLYM

Korlym is a prescription medicine used to treat high blood sugar (hyperglycemia) caused by high cortisol levels in the blood (hypercortisolism) in adults with endogenous Cushing's syndrome who have type 2 diabetes mellitus or glucose intolerance and have failed surgery or cannot have surgery.

Korlym is not for people who have type 2 diabetes mellitus not caused by Cushing's syndrome.

It is not known if **Korlym** is safe and effective in children.

Do NOT take Korlym if you:

- are pregnant
- are taking medicines that contain simvastatin, lovastatin, cyclosporine, dihydroergotamine, ergotamine, fentanyl, pimozide, quinidine, sirolimus, or tacrolimus
- must take corticosteroid medicines for other serious medical problems
- have experienced unexplained vaginal bleeding, changes in the cells lining your uterus (endometrial hyperplasia), or cancer of the lining of your uterus (endometrial cancer)
- are allergic to mifepristone or any of the ingredients in **Korlym**.

Tell your healthcare provider about all your medical conditions, including if you:

- are pregnant or plan to become pregnant
- have low potassium in your blood (hypokalemia)
- have or have had a bleeding problem or are taking medicines to thin your blood
- have or have had heart problems
- have had an organ transplant
- have been taking medicines called corticosteroids (cortisone, dexamethasone, methylprednisolone, prednisolone, prednisone)
- are breastfeeding or plan to breastfeed

You should not drink grapefruit juice while you take **Korlym**.

Tell your healthcare provider about all the medicines you take, including prescription and nonprescription medicines, vitamins, and herbal supplements. Using **Korlym** with certain other medicines may affect each other or may cause serious side effects.

POSSIBLE SIDE EFFECTS OF KORLYM

Korlym may cause serious side effects, including:

- **reduced effects of adrenal hormones (adrenal insufficiency).** Tell your doctor right away if you have unusual tiredness or weakness, nausea, fatigue, low blood pressure (hypotension), low blood sugar (hypoglycemia)
- **low blood potassium (hypokalemia).** Your doctor should check the level of potassium in your blood before you start taking **Korlym** and while you take it. Tell your doctor if you have muscle weakness, aches or cramps, abnormal or irregular heartbeats (palpitations)
- **bleeding from the vagina.** **Korlym** may cause the lining of your uterus to become thick and may cause your uterus to bleed. Tell your doctor right away about any bleeding from your vagina that is not normal for you
- **disruption of menstrual cycle**
- **problems with the electrical system of your heart (QT interval prolongation)**
- **worsening of symptoms of other medical problems that are treated with corticosteroids when you take corticosteroids and Korlym at the same time.**
